Mentor: Rie Kamikubo

BACKGROUND

19 million people in
U.S. reside in low-income
areas with no access
to large grocery stores

25% of cardiovascular-
related **deaths** are
attributed to **poor**
diet lacking fruits and
vegetables

Poor diet a primary
contributor to over half a
million deaths in 2016

Motivation

This Photo by Unknown author is licensed under [CC-BY-NC-ND](#).

How to increase food access for these low-income low-access people while also encouraging their fruit and vegetable intake?

Research Design

1. Identify low-income and low-access population

- 1) Least income
- 2) Farthest distance to a nearby supermarket
- 3) No access to transportation

2. Determine their top obstacles in access using both data and previous research

3. Policy recommendations

Tools

1. Data: 2012 USDA Food Acquisition and Purchase Survey (FoodAPS)
2. Data Visualization: Tableau
3. Data Cleaning: Python

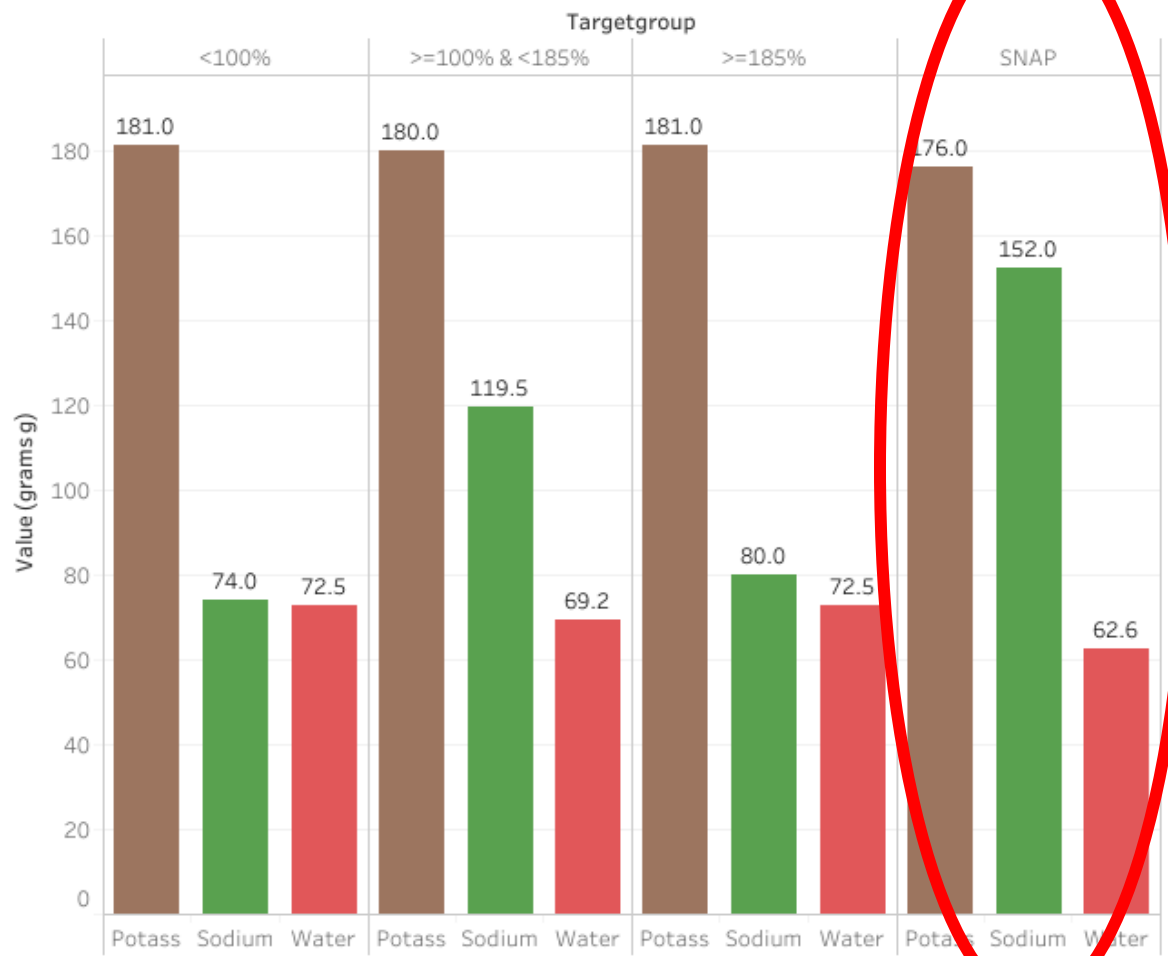

RESULTS

Income Groups with No Transportation Located Farthest from Nearby Supermarket

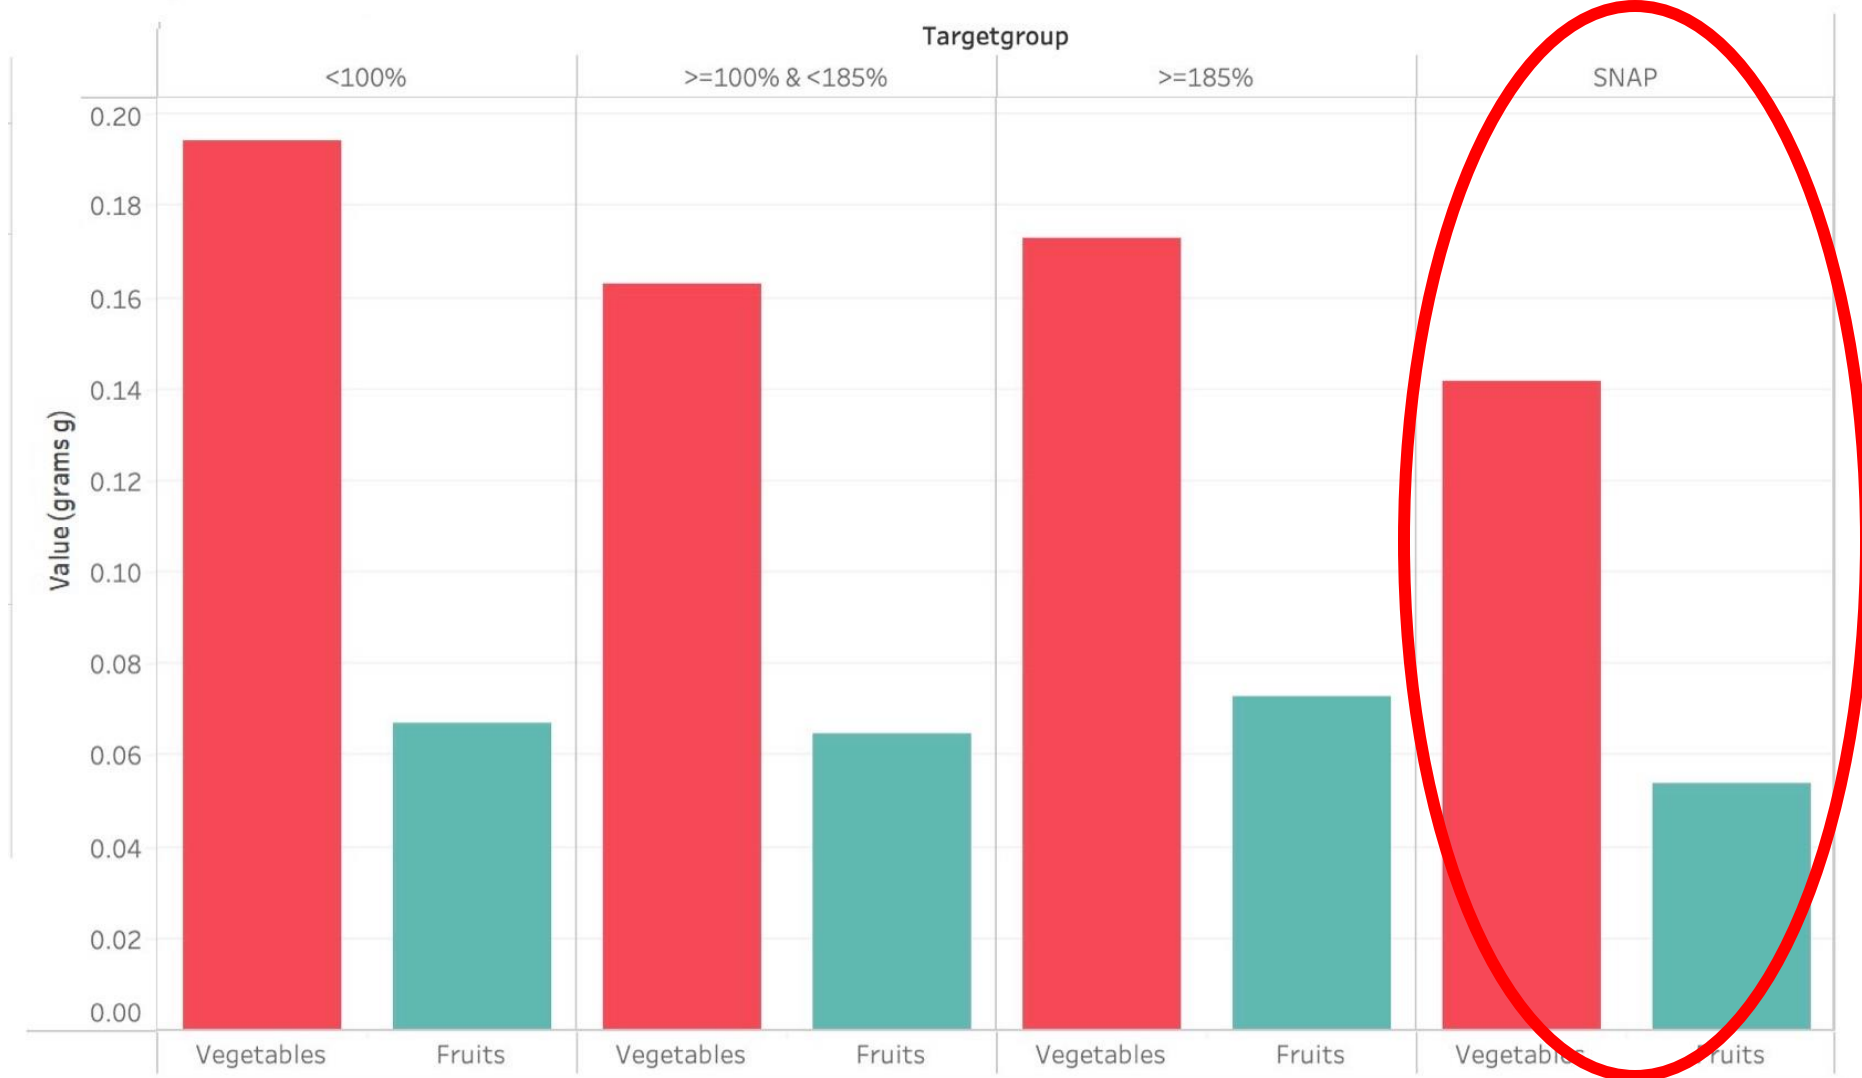

Foods At Home

Foods Away From Home

Average Vegetable vs. Fruit Consumption at Home

Average Meats vs. Dark Green Vegetables Consumption At Home

Obstacles To Access

1. Farthest Distance To Nearby Supermarket
 2. No Transportation Access
 3. Low Income
 4. High Prices
 5. Nutritionally Illiterate
-

Policy Recommendations

1) Increasing access to supermarkets

2) Incentivizing food delivery services for low-access locations

3) Supporting local food businesses

4) Expanding urban agriculture

5) Increasing efficiency in the perishable food supply chain

6) Partnering with food delivery services to launch a tech education program

7) Have more food delivery services accept SNAP and WIC

Future Work

We recommend examining access to technology or implementing smartphone delivery applications as an intervention to low food access in this demographic.
